

Medical Records, Understood.

AI-powered medical records
intelligence as clear as a bell.

Asabell™ transforms complex medical records into structured, source grounded intelligence that helps claims and legal professionals understand medical evidence faster, reduce manual review, and make more informed decisions.

Built into Compex's trusted medical record workflow, Asabell organizes clinical, provider, and billing information as records are delivered, creating a case foundation that becomes more useful as the matter develops.

Traditional Medical Record Review

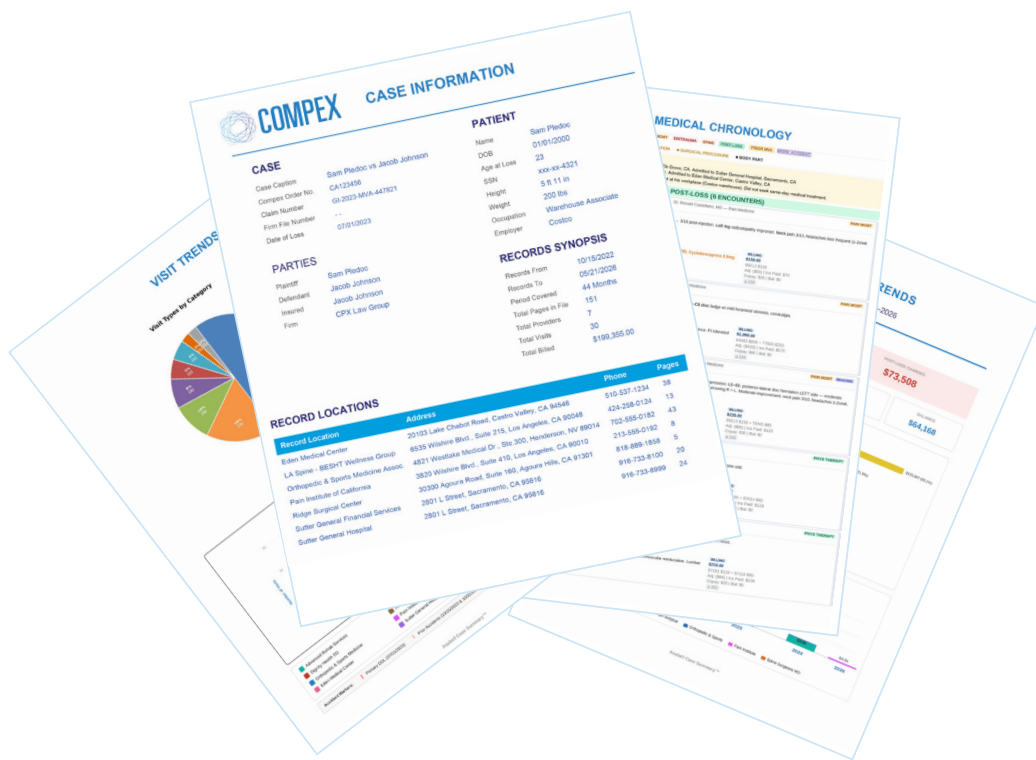

- Overwhelming record volume
- Manual chronology reconstruction
- Scattered clinical and billing data
- Manual search for key evidence
- Rebuilding the medical story for each review need
- Waiting days or weeks for manual summaries
- More tools. More complexity.

VS.

Intelligent Review with Asabell

- Structured medical record intelligence
- Organized chronology of care
- Consolidated billing summaries and analysis
- Findings backed by evidence citations
- One structured foundation that supports multiple analyses
- Summaries typically ready the same day
- Intelligence built into the Compex workflow

Work begins as records arrive

Records from multiple providers arrive in different formats with clinical and billing documentation mixed together. Asabell identifies and organizes the relevant information alongside the original source records, so intelligence begins developing before the full set is complete.

Find what matters without reading every page

Encounters, diagnoses, treatments, providers, procedures, medications, and billing information are organized into reviewer-ready record intelligence with evidence citations that reference the supporting medical records. Follow the progression of care across providers and dates of service without searching through every page.

New records build on what you already know

As additional records are delivered, Asabell adds them to the structured case foundation. Reviewers follow treatment progression and see how the case is changing, without rebuilding the medical story from the beginning.

The complete case is delivered in one view

Asabell Case Summary brings the complete record set into one plain-language view, so claims and legal professionals review cases faster, reduce manual review, and make more informed decisions

Built on the Complex Advantage

For more than 50 years, Complex has been trusted to retrieve medical records that drive claims and litigation decisions. That experience gives Asabell an advantage standalone AI tools can't easily replicate.

Standalone AI tools enter the process only after medical records have already been collected, organized, and uploaded. Asabell works differently. Complex retrieves the records and organizes the medical information into structured, source-grounded intelligence within a single workflow. Customers get one partner for retrieval, intelligence, and source verification, without adding a disconnected vendor or rebuilding the same record set.
